

How do I change my computer's password?

Do to the wide varieties, makes, and models of desktop, laptop, and notebook computers, the process of changing your computer's Windows password may vary. With most windows models, the use of the **'Help'** option for the particular computer is the best way to determine how to change your computer's password.

Click: **'Start'**, then the **'Help'** option to display the help topics.

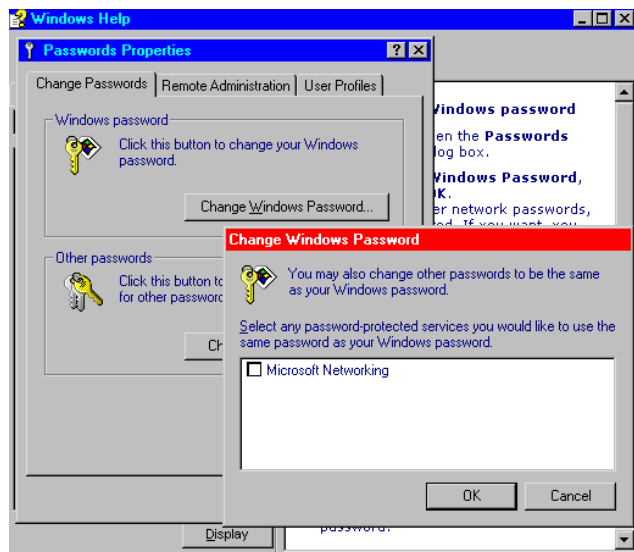

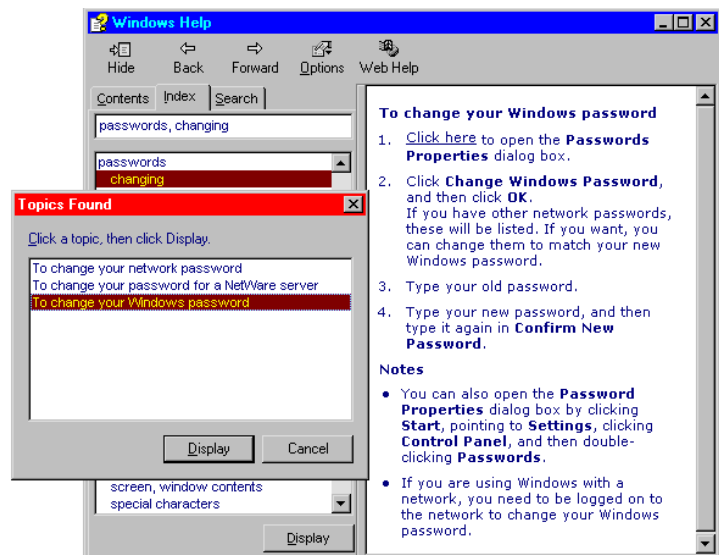

Locate and display the **'Password'** section that should have a Changing password topic.

Double click the **'Changing'** topic.

There should be a topic **"To change your Windows password."** Highlight and double click.

A **"To change your Windows password"** topic should be displayed.

Select the **Click here** to open the **Passwords Properties** dialog box.

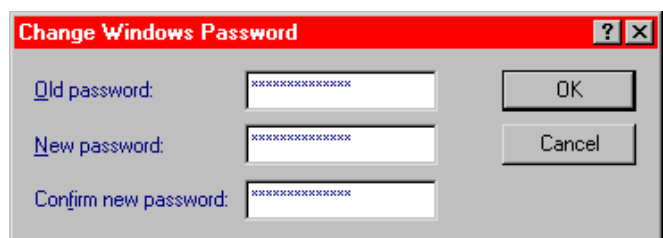

Click **Change Windows Password**, and then click **OK**

Type your **Old password**.

Type your **New password**.

Type it again in **Confirm new password**.

Click **'OK'** to apply any changes made, or click **'Cancel'** to leave the setting unchanged.
